VIDEO PRODUCTION SCRIPT

REWIND THE APP

A 2-Minute Promotional Video Script

DURATION: 2:00 · FORMAT: 1080p · STYLE: Nostalgic Cinematic

Total Scenes: 10 · Music: Lo-fi / Synthwave Blend · Voice: Warm, Conversational

Target Audience: Millennials & Gen Z · **Tone:** Emotional, Playful, Wistful

OVERVIEW

The Story We Are Telling

This script follows a single emotional arc: **the viewer enters their birth year and is transported back to the sights, sounds, and culture of their formative years.** The video opens with a mysterious, dark interface that sparks to life. As the decade theme activates, the entire visual language shifts. We see curated movies, a vintage camera, retro games, an AIM-style chat, a personal timeline, and a memory gallery. The closing lands on an emotional note about the power of nostalgia and the importance of holding onto who you are.

The pacing mirrors a VHS tape being inserted and played. Each scene transition uses CRT flickers, scanlines, or tape-tracking artifacts. The music starts sparse and ambient, builds through the decade reveal, peaks during the feature montage, and resolves to a soft, warm close. The voiceover is warm and conversational, like a friend showing you something they love, never corporate or salesy.

TIMELINE

Scene Breakdown (120 seconds)

SCENE 01 0:00 - 0:10

COLD OPEN - THE DARK SCREEN

> **VISUAL:** Black screen. Slowly, green CRT text appears character by character, like a computer booting: "BIOS v2.4 -- Nostalgia Systems Inc." then "Detecting memories... 640K OK." A faint synthwave grid fades in from the bottom. The Rewind logo materializes pixel by pixel in the center. A soft glow pulses around it.

VO: *"What if you could go back? Not just remember, but* **feel** *it again. The sounds. The colors. The person you were.">*

SFX: Low CRT hum, faint dial-up static. Music: Single sustained synth pad, barely audible. Camera: Static wide shot, slow zoom in.

SCENE 02 0:10 - 0:18

THE QUESTION

VISUAL: The boot text fades out. A clean, elegant input field appears: "What year were you born?" A cursor blinks. A hand types "1990" (or whichever year). The screen pauses for a beat. Then a VHS tracking glitch tears across the screen. The loading screen kicks in: cassette reels spin, progress bar fills chunkily. Text reads: "Rewinding tape..." The decade title slams in: "THE 90s" with a Windows 95-style title bar.

VO: *"Enter your birth year. And just like that, the world shifts. Your world. The one you grew up in."*

SFX: Keyboard clacks, VHS tracking glitch, cassette rewind. Music: Tempo picks up slightly, adds a lo-fi drum pattern. Camera: Tight on the input, then pull back for the theme reveal.

SCENE 03 0:18 - 0:30

THE DASHBOARD REVEAL

VISUAL: The full dashboard appears with a smooth fade. We see the wood-grain header, the cork-board background, the decade badge. The camera slowly pans across the tab bar: Reel, Movies, Journal, Games, Contacts, Memory, Timeline. Each tab lights up briefly as the camera passes. The hero section shows the decade name and tagline. The whole interface has transformed -- if it was the 80s, everything is neon and dark. If 90s, gray beveled windows. If 2000s, glossy blue gradients.

VO: *"This is Rewind. A personal time machine that rebuilds your entire childhood in one screen. Every movie. Every game. Every memory. Curated just for you, from your first year to eighteen."*

SFX: UI click sounds, subtle whoosh on tab highlights. Music: Full lo-fi beat drops here. Camera: Slow dolly across the interface, shallow depth of field on foreground elements.

SCENE 04 0:30 - 0:50

FEATURE MONTAGE - MOVIES, JOURNAL, GAMES

VISUAL: Quick cuts between features. **Movies tab:** Poster grid scrolls with real movie posters from the era. A card expands showing the overview. **Journal tab:** A hand writes with an ink-pen font on aged paper. Lines appear as if being written in real time. **Games tab:** Tic-tac-toe being played, Minesweeper grid revealed, word search being solved. Each game shows the retro styling of the selected decade.

VO: *"Browse 111 curated movies from your era, with real posters and ratings. Write in your journal with a vintage fountain pen. Play the games you grew up with -- Minesweeper, Tic-Tac-Toe, Word Search. All styled to match your decade."*

SFX: Page turn for journal, game sound effects. Music: Beat continues, add playful melody line. Camera: Quick cuts (1-2 sec each), smooth transitions. Each feature demo is 5-7 seconds.

SCENE 05 0:50 - 1:05

FEATURE MONTAGE - CONTACTS, CAMERA, MEMORY

VISUAL:Contacts tab: Three folder icons appear. Click one -- it expands to show the Rotary Phone. A finger drags the dial, it spins with a satisfying animation. Switch to Retro Chat -- a dial-up connection animation plays (progress bar, static, "Connected at 56.6 Kbps"), then an AIM-style chat window appears with a buddy typing. **Camera:** The camera icon in the header is tapped. The vintage camera opens with live preview and retro filter presets (Sepia 70s, Faded 80s, etc.). A photo is taken with a flash effect. **Memory tab:** The photo appears in a polaroid grid alongside gallery uploads. A filmstrip view scrolls horizontally.

VO: *"Dial a rotary phone and hear it ring. Chat on AIM with a dial-up connection. Take retro photos with real vintage filters. Every moment gets saved in your Memory gallery -- photos from the camera or from your own device."*

SFX: Phone dial clicks, ring, dial-up modem sounds, camera shutter. Music: Peak energy here, most dynamic section. Camera: Mix of close-ups on interactions and wider contextual shots.

SCENE 06 1:05 - 1:15

TIMELINE AND AI INSIGHTS

VISUAL: The Timeline tab shows a vertical timeline of the user's life from birth to age 18, with cultural milestones, movie releases, and historical events marked alongside personal age markers. The camera scrolls down slowly. Then the AI Insights panel appears -- it shows a thoughtfully generated reflection about the user's generation. The NostalgiaFeatures page is teased: Guestbook, Mixtape Creator, Magic 8-Ball, Tamagotchi pet.

VO: *"See your whole life timeline -- every movie, every cultural moment that shaped you. AI-generated insights reflect on what your generation means. Plus: sign a guestbook, create a mixtape, shake a Magic 8-Ball, and keep a virtual Tamagotchi alive."*

SFX: Soft whooshes on timeline scroll. Music: Energy starts to soften, transition to more emotional tone. Camera: Steady vertical scroll, then slow pull back.

SCENE 07 1:15 - 1:30

THE THREE DECADES

VISUAL: Quick split-screen or rapid cuts showing the same app in three different visual themes. **Left:** 80s theme -- black background, neon green text, VT323 pixel font, glowing buttons, synthwave grid, scanlines. **Center:** 90s theme -- Windows 95 gray, beveled 3D buttons, Courier Prime, navy title bars. **Right:** 2000s theme -- powder blue, glossy orange buttons, rounded corners, Nunito font, drop shadows. The same dashboard, three completely different feels. Each transition has a CRT power-off/on flicker.

VO: *"Born in the 80s? Neon green and synthwave. The 90s? Beveled windows and Courier Prime. The 2000s? Glossy gradients and rounded corners. The entire app transforms to match your era. Every texture, every font, every button. It is not a skin -- it is a time machine."*

SFX: CRT power-on/off sounds for each transition, subtle decade-appropriate music shifts. Music: Brief genre shifts matching each decade (synthwave, grunge, pop-punk). Camera: Split screen composition or rapid 2-sec cuts with glitch transitions.

SCENE 08 1:30 - 1:40

MEMORY REEL

VISUAL: The Reel tab is triggered. A full-screen overlay appears showing memories flowing in a cinematic film-reel format. Photos, journal entries, and movie posters cascade across the screen with smooth parallax scrolling. The experience feels like watching a home movie. The camera icon in the header flashes briefly, hinting at the vintage camera.

VO: *"Hit play on the Memory Reel and watch your entire childhood flow by like a home movie. Every journal entry. Every photo. Every movie poster from the years that made you."*

SFX: Film projector sound, subtle reel clicking. Music: Most emotional peak of the soundtrack, warm strings or pads. Camera: Slow, cinematic dolly through the reel feed.

SCENE 09 1:40 - 1:50

EMOTIONAL CLOSE

VISUAL: The timeline tab is shown one more time, scrolled to the bottom. The closing message appears: "You made it through. Every memory on this page is a piece of who you are. The world moves fast, but your roots are deep." A warm, slow zoom into the text. The background subtly pulses with the decade's accent color. Everything else fades to black except this message.

VO: *"Every memory on this page is a piece of who you are. The world moves fast, but your roots are deep. You came from simpler times. And that strength lives in you still."*

SFX: Music fades to solo piano or single synth. Camera: Very slow zoom, almost imperceptible. Lighting: Warm, golden hour feel even on screen. This is the emotional climax.

SCENE 10 1:50 - 2:00

OUTRO - LOGO AND CTA

> **VISUAL:** Black screen. The Rewind logo fades in, styled in the synthwave neon aesthetic (green glow, pixel elements). Below it: "rewind.app" or the app URL. A single line fades in: "Because you are human, not a machine. Take it easy." The decade color accents briefly flash -- green, navy, blue -- in sequence. Then everything fades to black. One final CRT power-off effect.

VO: *"Rewind. Because you are human, not a machine. Take it easy."*

SFX: CRT power-off. Music: Final chord resolves and rings out. Silence for last 2 seconds. Camera: Static, centered on logo. No movement.

PRODUCTION NOTES

Technical and Creative Guidelines

MUSIC DIRECTION

Use a lo-fi / synthwave blend that shifts by decade. 80s sections lean into analog synths and arpeggiated basslines. 90s sections add grunge-influenced guitar textures and drum loops. 2000s sections brighten with clean electric piano and polished production. The emotional close should strip back to a single piano or ambient pad. License from Artlist, Epidemic Sound, or similar. Total music cost target: under $50.

VOICE-OVER CASTING

Cast a warm, conversational voice -- think documentary narrator, not commercial announcer. Age 28-40 preferred. The tone should feel like a friend showing you something personal, never salesy or corporate. Pace should be unhurried, with natural pauses. American English, neutral accent. Record at 44.1kHz, 16-bit WAV. Budget approximately $100-200 on platforms like Voices.com or Fiverr.

RECORDING AND EDITING

Record the app screen at 1080p using a screen capture tool (OBS, ScreenFlow, or system built-in). For the three-decade split section, record the same dashboard three times with different birth years. Add CRT/glitch transitions in post using overlays (scanline PNG, tracking distortion, VHS color shift). Use subtle camera movements in post (digital zoom, slow pan, slight parallax on UI layers). Target a 1-2 second hold on each feature showcase for readability. Export at H.264, 30fps, 8-12 Mbps for web delivery.

DISTRIBUTION

Primary: Instagram Reels / TikTok (9:16 vertical crop, 60-second highlights). Secondary: YouTube (16:9 full version, 2:00). Tertiary: App Store / Play Store preview (30-second supercut of best moments). Create a 15-second teaser for Twitter/X and LinkedIn. All versions should feel native to their platform while maintaining the retro aesthetic.

END OF SCRIPT

"Every memory is a piece of who you are."

This script is designed to be recorded in a single session using screen capture and voice-over. No external assets required beyond the app itself and licensed music.
